Necessary Patent Claims do not include any claims (i) other than those set forth above even if contained in the same patent or patent application as Necessary Patent Claims; (ii) that read solely on (1) any implementation of any portion of the Ratified Specification that is not a Compliant Portion, or (2) any Compliant Portion that is not within the bounds of the Scope; or (iii) that it is possible to avoid infringing because there is a commercially plausible non-infringing alternative for implementing such portions of the Ratified Specification.

“Reciprocal License” means the perpetual, royalty-free, fully paid, worldwide, nonexclusive license under any Necessary Patent Claims to make, have made, use, import, offer to sell and sell Compliant Portions, together with the right without royalty or fee to sublicense to third parties (a) the right to distribute Compliant Portions through the normal tiers of distribution to end users or to resellers, distributors, dealers and authorized manufacturers and others in the distribution channel, and (b) the right to reproduce Compliant Portions solely in connection with the distribution permitted under paragraph (a) of this definition, provided, however, that the royalty-free provisions shall not apply to Necessary Patent Claims that, if licensed would require payment by licensor to unaffiliated third parties.

“Scope” means the application program interfaces and data structures solely to the extent disclosed with particularity in a Ratified Specification where the sole purpose of such disclosure is to enable products to interoperate, interconnect, or communicate as defined within a Ratified Specification. Notwithstanding the foregoing, the Scope does not include: (a) any enabling technologies that may be necessary to make or use any product or portion of any product that complies with the Ratified Specification, but are not themselves expressly set forth in the Ratified Specification (e.g. semiconductor manufacturing technology, hardware architecture, processor architecture or microarchitecture, compiler technology, object oriented technology, basic operating system technology, compression technology, algorithms, and so on); or (b) the implementation of other published specifications developed elsewhere but referred to in the body of the Ratified Specification; or (c) any portions or combinations of any product whose purpose is not required for
compliance with the Ratified Specification. For purposes of this definition, the Ratified Specification will include only interconnection requirements and will not include any implementation examples or any information pertaining to the architecture, design or operating principles of any implementations unless such implementation examples or information are expressly identified as being included as part of the Ratified Specification, and provided that the Reviewer or Members submitting the Contributions including such implementation examples or information provide their consent to such identification.
